

Trigonometry- Enriched notes

To find unknown sides use: **SOHCAHTOA**

O= opposite- always located opposite of the angle given

H= hypotenuse- always the longest side of the triangle

A= adjacent- side which is not the O or the H.

SOH

CAH

TOA

Steps to determine which to use:

- 1- Place hyp, adj and opp on the triangle
- 2- Determine if use cos, sin or tan
- 3- Solve for unknown
